

Lab 10

- quadtrees
 - (0,0) is in the upper left corner of the drawing window
 - the y coordinate gets bigger going down

Lab 10

- voting power
 - be careful not to mix up the block index and its number of votes
 - look at the comments for the methods of ElectionTally to know which is needed
 - be careful not to mix up the block of interest (the one whose voting power is being computed) and the current block for which the voting alternatives (candidate 0, candidate 1) are being considered
